

PUNJAB AGRICULTURE STATISTICS - 2019

Bureau of Statistics
Planning & Development Board
Government of the Punjab

Preface

Bureau of Statistics, Punjab is an attached department of the Planning and Development Department, Government of the Punjab. Its mandate is to collect, compile, analyze and disseminate official statistics, relating to economic, social, demographic and other important aspects of society and its aim is to provide accurate, timely and quality data to facilitate data user for number of purposes, including quantitative analysis, informed decision making, planning, monitoring, evaluation and research. The department has regular and periodic publications, covering statistics for almost all sectors in Punjab.

Punjab Agriculture Statistics is one of the most important publications which contains information on almost all components of agriculture economy of the province. In order to improve the scope of this publication, information about number of Mini Dams with Capacity of Storage Water (In Unit of Measurement) and Area Irrigated (in Hectares) by division and district in the Punjab by Tehsils, number of Bulldozers by Division/District , Laser Leveler under the Punjab Irrigated-Agriculture Productivity Improvement Project (PIPIP) and improved watercourses by district and tehsil in the Punjab have been included in this edition.

Punjab Agriculture Statistics will prove to be a valuable source for planning efforts of Government of the Punjab and agriculture development partners, and a reference for academia and research organization.

(CH. SAJID RASUL)

DIRECTOR GENERAL

Editorial Board

Ch. Sajid Rasul	Director General
Malik Zafar Ali	Director
Mr. Mubarak Ali	Deputy Director
Mr. Muhammad Sarfaraz	Assistant Director

Data Composition

Miss Shama Khaliq	Statistical Assistant
Mr. Immad Ejaz	Statistical Assistant
Ms. Saima Shokat	Typist

Symbols and Abbreviations

-	=	Nil or Insignificant
N.A.	=	Not Available
n.a.	=	Not Applicable
Divn.	=	Division
Distt.	=	District
N.R.	=	Not Reported
R.E.	=	Revised Estimates
B.E.	=	Budget Estimates
FATA	=	Federally Administered Tribal Areas
MSCFD	=	Million Standard Cubic Feet Per Day
(p)	=	Provisional
(r)	=	Revised
N	=	Nitrogenous Fertilizer
P ₂ O ₅	=	Phosphatic Fertilizer
K	=	Potash
Rs.	=	Rupees
One Lac	=	100,000 = 100 Thousand
Ten Lacs	=	1,000,000 = 1 Million
One Crore	=	10,000,000 = 10 Million

Note:- In some tables, totals may not tally with the sum of their component items due to independent rounding off of totals and their component items.

EXPLANATORY NOTES ON AGRICULTURE STATISTICS

Agriculture section mainly comprises of Agriculture & Mereology, detailed description and definitions of the relevant terms are given along with each headings:

A- Agriculture

Agriculture Statistics includes data on following topics:-

1. Land Utilization;
2. Agricultural Farms;
3. Agricultural Inputs (Temperature, Rainfall, Canal With-drawls, Sales, Nutrients Per Kg. and Prices of Fertilizers, Distribution of Improved Seeds and Area Treated with Pesticides)
4. Tube wells Installed, Electrified and Pumping in SCARPS' Areas; their Pumpage Capacity and Actual Pumpages;
5. Tractors by Ownership and Imports of Tractors;
6. Agricultural Institutional Credit;
7. Cropped Area and Area irrigated by Different Modes of Irrigation, Total Area Sown under various Crops (Total and Irrigated) and Area Failed:
8. Production and Per Hectare Yield of Important Crops. Area and Production of Various Oil Seeds, Fruit and Other Minor Crops: and
9. Water Table Depths

The collection and compilation of Land Utilization, Crop Acreage and Production data are explained below:-

a) Land Utilization

Land Utilization Statistics are compiled from the returns supplied by the tehsil offices based upon summarization of crop inspection data entered in Form-I of "Lal Kitab" of each Revenue Estate through Computer processing in this Bureau.

Definitions of the terms used in the Land Utilization Statistics are given below:-

- i) Total Area Reported means the total physical area of the village/deh, tehsil or district etc. It includes cultivated area (net area sown + current fallow), culturable waste, unculturable land and forest area.
- ii) Forest Area means the area of any land classed or administered as forest under any legal enactment dealing with forests. Any cultivated area which may exist within such forest should be excluded and shown under the heading cultivated area.
- iii) Total Cropped Area means the sum total of area sown during Kharif and Rabi seasons during a given year including Zaid Kharif and Zaid Rabi.

- iv) Not Available For Cultivation means the land absolutely barren, roads, canals, tanks, beds of rivers, torrents and ravines, sites of villages, houses, hills, mountains, sand dunes and all land devoted to uses alien to agriculture.
- v) Culturable Waste means all cultivable land not actually cultivated. It should include all grazing and other land not included under forest.
- vi) Cultivated Area means the land currently being used for agricultural purposes, including land under crops, orchards as well as current fallow. It is the area net sown plus current fallow.
- vii) Current Fallow means the part of the cultivated area which has not been used for cropping during the year under reference but for which the total vacant period does not exceed three crop seasons. The land remaining vacant for more than three successive seasons should be shown under the head 'cultivable waste'
- viii) Area Sown means the area which has been sown at least once in a year. It will include area under crops, fruit, vegetables etc.
- ix) Area Sown More than once means the difference between the total cropped Area and net sown i.e. the difference between (iii) and (viii).

b) Area Under Crops

Census of Crop Acreage is conducted by the Revenue Patwaries, twice a year, one for Kharif Season and other for Rabi Season in all about 25914 Mauzas of the Punjab Province and 201 Mauzas of Islamabad. The Mauza-wise Crop Acreage Returns (Goshwara Jinswars) prepared manually by the Patwaries, are collected by the Bureau of Statistics, through Director Land Records from the Tehsildars. These returns are checked by the Bureau for completeness of coverage, edited, coded and entered in Computer. Credibility checks are applied at mauza level with the help of the Computer. These statistics are utilized by the Agriculture Department in the preparation of final production estimates. It may, however, be mentioned that 'Zaid Rabi' crops like Tobacco and Onion are not fully covered through this census as separate crop inspection is carried for these crops. The manually compiled acreage of these crops by the Revenue staff is, therefore, used for preparation of the final estimates of these crops.

c) Production of Crops

For Wheat, Cotton, Rice, Maize and Sugarcane, the Agriculture Department conducts Random Crop-Cutting Surveys. The observed data of these Surveys are edited in the light of available data on weather conditions, availability of water, use of fertilizers and other agricultural inputs. The Survey Estimates of yield-rates are then modified and utilized to prepare 'Official' production Estimates.

For other crops, the yield-rates are estimated on the basis of farmers opinion surveys and edited with the help of data on inputs, rainfall and weather conditions etc. The yield-rates thus arrived at are then applied to estimate the 'Official' estimates of total out-turn of the respective crops.

d) Source of Irrigation

According to the Assessment Rules, 1968; in The West Pakistan Land Revenue ACT, 1967, the following sources of irrigation are described as:

- i) Barani- dependent of rainfall
- ii) Sailab- flooded or permanently moist by rivers
- iii) Rod-kohi—watered from hill torrents

- iv) Abi- watered lift from tanks, jhils, streams, by flow from springs or karezes
- v) Nehri (Canals)- irrigated by canals by flow or lift
- vi) Chahi (Well)- watered from wells
- vii) Chahi-nehri (Canal-Wells) —irrigated partly from well and partly from a canal
- viii) Nul-chahi (Tube-well)—watered from tube-wells

B- Meteorology

The sub-section includes mean of minimum and maximum temperatures at selected stations from 2001 to 2010. The rainfall at the specified stations is recorded in millimeters instead of inches & cents ("1 = 25.4 Millimeters) at 0500, 0800 and 1700 Hours. PST daily by the Meteorological Observatories.

The Meteorological Observations recorded daily at different hours are copied by the Observers in Monthly Meteorological Register and this Register is sent to Regional Centre at 46-Gulberg Road, Lahore in the first week of each succeeding month. These Registers are then thoroughly scrutinized by the trained Meteorological Staff at Lahore and corrections are applied, where ever necessary.

The sums, averages and extreme (maximum & minimum) values of all the Meteorological Observations are also worked out by the scrutinizing staff. On the basis of these monthly values over a long period of 30 years the normal values are worked out.

C- Limitations

The timely availability of statistics depends on two factors, first, the receipt of reports from the Field Staff and secondly, their tabulation at the Provincial level. As far as the acreage under various crops is concerned, the Bureau of Statistics has been trying to reduce the time-lag by collecting mauza-wise Goshwara Jinswars directly from the Revenue Field Staff through Director Land Records and by minimizing the tabulation time. The centralized collection and tabulation has reduced tabulation time appreciably.

Most of the agricultural statistics are by-products of the administrative activities of the Revenue Department. Since the collection of Statistics is not primary aim of the Revenue Department, the system has not provided for quality control on statistics derived from its records. The compilation of figures at all levels is done manually which undoubtedly contains errors of coverage, classifications, summations etc.

NOTE: Kharif and Rabi Crop Seasons run from April to September and October to March respectively.

Temperature and rainfall are certain variables who mainly determine the seasons. Mean of maximum and minimum temperatures were calculated using data from 2007 to 2018 which depict that the mean of maximum temperature is highest at Khanpur which is 34.7 in 2018 and second highest centre for mean of maximum temperature is Bahawalnagar having value 34.1 in 2018. Similarly, the mean of maximum temperature is lowest to 19.9 at Saikot in 2018. Mean of minimum has been observed highest at Multan which is 32.4 in 2018 and mean of minimum lowest temperature is 13.9 at Rawalpindi/ Islamabad in 2014.

Source :- Director, Regional Meteorological Centre, Lahore.

Rainfall data from 2007 to 2018 reveals that maximum rainfall was recorded at Murree during last eleven years which is 2418 millimeters in 2015. Minimum rainfall was recorded in Multan in 2018 which is 60 millimeters. Graphical presentation is witness that Murree shows highest rainfall. There is weak inclination in the graph to have rainfall in Bahawalnagar, Bahawalpur, Faisalabad, Khanpur, Multan and Sargodha.

Rainfall data from 2007 to 2018 reveals that maximum rainfall was recorded 455.3 millimeters in Murree in July-2018 and 196.7 millimeter in August at the same station.

Cotton

Being a cash crop, cotton has a significant impact on the economy of farmer as well as agriculture sector. By taking 2008-09 as a base year it has been observed that there is 15.1% decrease in the index of area sown during the year 2018-19 and similarly a significant decrease in the production can be observed during the same which is 22.0%.

The area sown during the year 2018-19 decreased by 8.01% as compared to the year 2017-18 and the production decreased by almost 15.5%. In the year 2018-19 a decrease of 2.6 % in in the percentage of area sown compaired last year 2017-18.

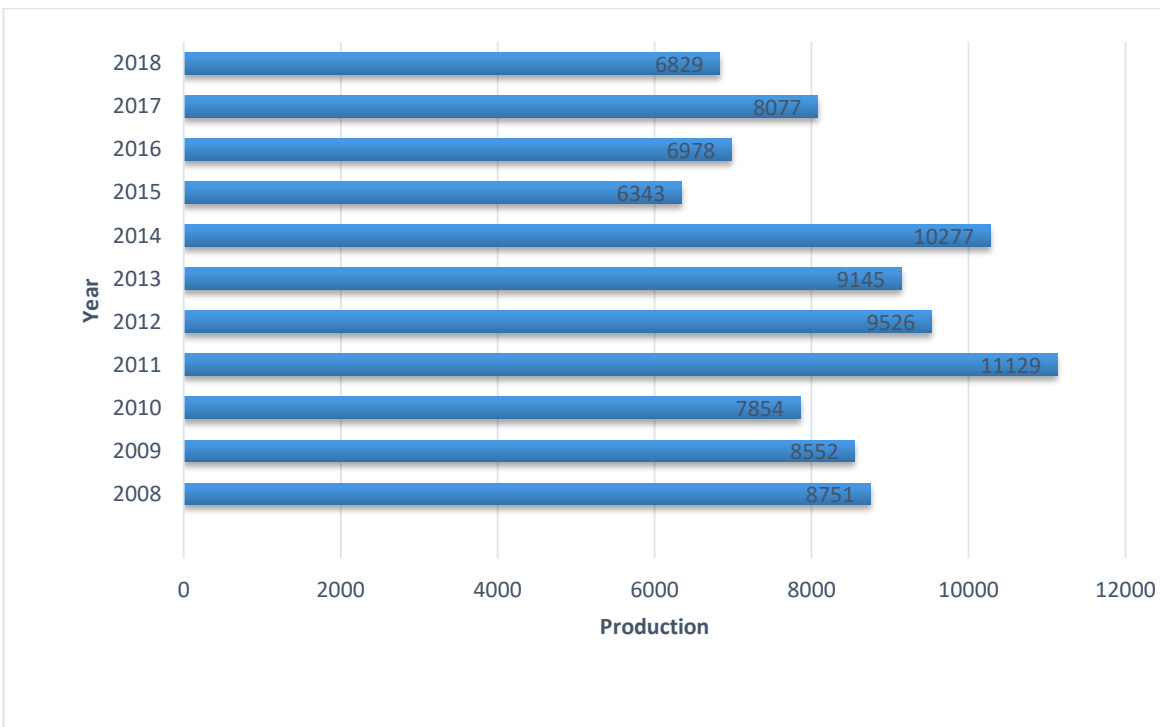

Table 6: Area Sown and Production under Sugarcane Crop in the Punjab, 2008 to 2018

Year	Total Area Sown	Sugarcane

Sugarcane

By taking 2008-09 as a base year it has been observed that there is 6.6% increase in the index of area sown during the year 2018-19 and similarly a increase in the production can be observed during the same which is 39.1%.

It is noticeable that since 2010-11, an increasing trend with mild fluctuations can be observed in the index of area sown and the maximum value of area sown index lies in the year 2017-18 with increase of 28.9% and during the same year a magnificent increase in the production of sugarcane can be noticed which is 70.5% and touched the highest point ever in the last ten years.

Jowar

By taking 2008-09 as a base year it has been observed that there is 23.9% increase in the index of area sown during the year 2018-19 and similarly a increase in the production can be observed during the same which is 16.1%.

The trend in the area sown and production of Jowar crop in the Punjab remained almost same on the basis of 2008-09 as a base year up till 2014-15. It has been observed that on the basis of 2008-09, there is 26.5% increase in the index of area sown during the year 2015-16 and similarly a significant increase in the index of production can also be observed during the same which is 22.8%. During recent year increment in the index of area sown and production of Jowar crop can be observed as 20.2% and 19.4% respectively.

Table 8: Area Sown and Production under Bajra Crop in the Punjab, 2008 to 2018

Year	Total Area Sown	Bajra

Bajra

By taking 2008-09 as a base year it has been observed that there is 15.0% increase in the index of area sown during the year 2018-19 and similarly a increase in the production can be observed during the same which is 39.0%.

The trend in the area sown and production of Jowar crop in the Punjab showed there is increasing trend with little bit fluctuation till 2017-18 on the basis of 2008-09. Maximum increase in the indices of area sown can be observed as 12.9% during the year 2017-18 on the basis of year 2008-09, while maximum increase in the production can be observed as 26.1% during the year 2017-18. Percentage share of area sown under Bajra crop in the Punjab shows almost smooth patern which fluctuates from 5.3 to 5.9.

Table 9: Area Sown and Production under Rice Crop in the Punjab, 2008 to 2018

Year	Total Area Sown("000 " hect)	Rice

Rice

By taking 2008-09 as a base year it has been observed that there is 1.9% decrease in the index of area sown during the year 2018-19 and similarly a increase in the production can be observed during the same which is 9.2%.

Rice being produced in Punjab has many varieties with special aroma and taste. The indices of area sown show that during the alst ten years there a decreasing with mild fluction in the trend on the basis of 2008-09. Maximum decrease of 13.5% increase in the area sown cab be observed during the year 2012-13 with maximum decrease of 10% in the production of rice during the same year. Percentage of area sown of Rice in the Punjab, fluctuating 23.2 to 27.1.

Fodder Crop

By taking 2008-09 as a base year it has been observed that there no increase in the index of area sown during the year 2018-19 and similarly a increase in the production can be observed during the same which is 18.2%.

The contribution of livestock sector in GDP has a significant impact during the last decade due the encouraging and better policies devised by the government of the Punjab and concerned departments. The most noticeable statistics in the table is % share of area sown under fodder crop which fluctuate with minor change over the years that ranges from 11.9% to 13.4%. Same sustainable pattern is witness regarding indices of area sown and production but on the basis of base year 2008-09 and the indices of production show almost the stable trend.

Section 3: Area and Production of Rabi Crops in the Punjab (2008-2018)

Wheat

By taking 2008-09 as a base year it has been observed that there is 5.0% decrease in the index of area sown during the year 2018-19 and similarly a decrease in the production can be observed during the same which is 0.2%.

The continuous sequential cropping has been observed in the Punjab regarding wheat crop. During the Rabi crop season, data shows that the % share of area sown under wheat crop has a large share of area being cultivated for the wheat crop which fluctuates from 72.4% to 75.6% of the total cultivated area of the Punjab particularly for Rabi crops during the year 2008-09 to 2018-19.

Table 12: Area Sown and Production under Gram Crop in the Punjab, 2008 to 2018

Year	Total Area Sown	Gram

Gram

By taking 2008-09 as a base year it has been observed that there is 17.4% decrease in the index of area sown during the year 2018-19 and similarly a increase in the production can be observed during the same which is 49.5%.

Gram crop — grown predominantly in rainfed areas of Punjab particularly Bhakkar, Khushab, Layyah. The production of Gram crop depends on rain fall and due to which a noticeable change in the indices of production can be observed while the indices of area sown remain almost same with smooth pattern and same can be observed in the last column of the table i.e % share of the area sown which remained between 8.9% to 10.6% .

In the table above the indices of area sown show that there is slight decreasing trend in the following year as compare with the base year 2008-09. The lowest decrease in the area sown can be observed as a decrease of 17.8% during the year 2014-15 on the basis of 2008-09. Indices of production show that during the year 2011-12 a decrease of 65.9 % while the % share of the area sown was 12.5% and during the year 2012-13 the production increased by 5.0%, which is the highest level of production increment during the last ten year.

Table 13: Area Sown and Production under Barly Crop in the Punjab, 2008 to 2018

Year	Total Area Sown	Barly				
		Area("000") Hect.	Production("000") Tons.	Indices of Area Sown	Indices of Prod Sown	% Share of Area Sown

Barley

By taking 2008-09 as a base year it has been observed that there is 40.9% decrease in the index of area sown during the year 2018-19 and similarly a increase in the production can be observed during the same which is 39.1%.

Barley is the important cereal crop after wheat, maize, and rice but the % share of area sown under Barley crop in the Punjab is very low, which fluctuates from 0.2% to 0.4%. Indices of area sown and production show the decreasing pattern with mild fluctuation.

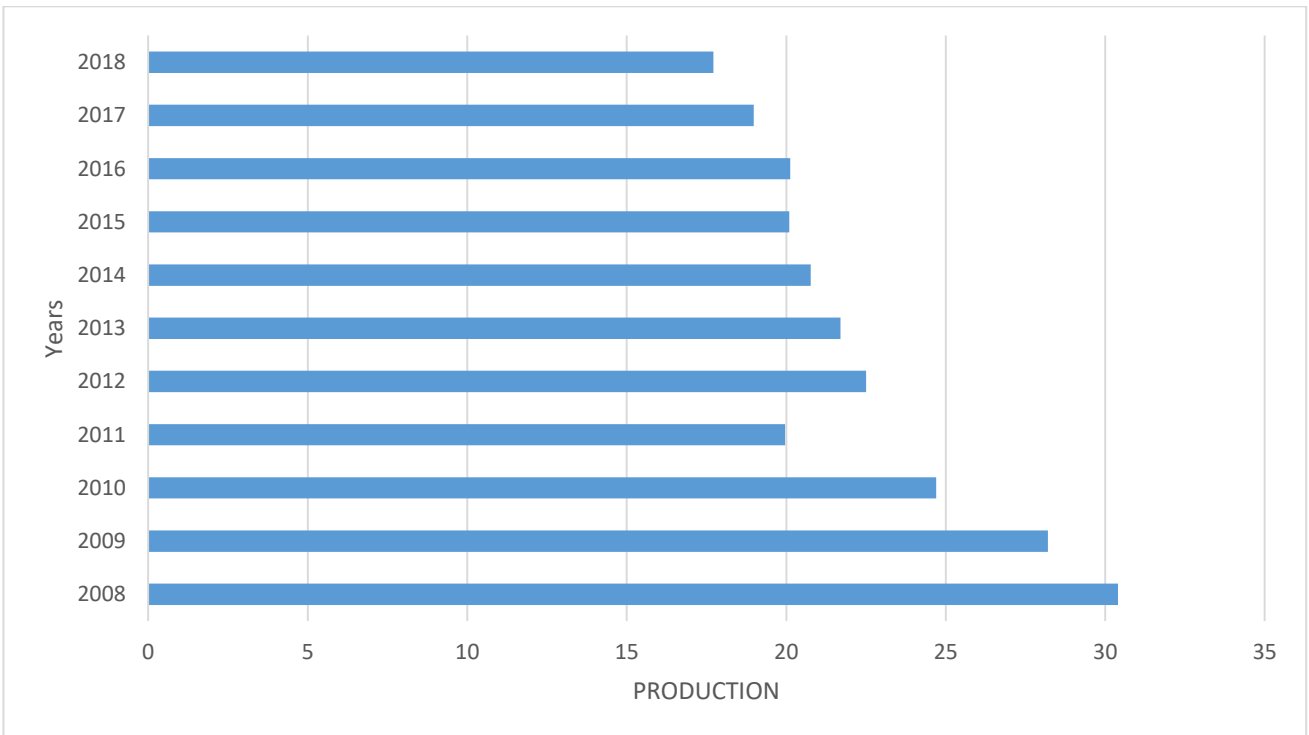

Table 14: Area Sown and Production under Rapeseed & Mustered Crop in the Punjab, 2008 to 2018

Year	Total Area Sown	Rapeseed & Mustered Crop				
		Area("000") Hect.	Production("000") Tons.	Indices of Area Sown	Indices of Prod Sown	% Share of Area Sown

Rape Seed & Mustard Crop

By taking 2008-09 as a base year it has been observed that there is 32.0% increase in the index of area sown during the year 2018-19 and similarly a increase in the production can be observed during the same which is 128.2%.

The % share of area sown under the Rapeseed and Mustard crops in the Punjab is low which fluctuates from 1.5% (2009-10) to 2.1%. (2012-13 & 2013-14). It is noticeable that during the year 2017-18, increase of 56.7% in the production can be observed, which is highest index of production during the last ten years. Almost a consistant pattern can be noticed in the index of area sown and production of Rapeseed and Mustardcrops in the Punjab during the last ten year on the basis of 2008-09.
